

Extrakta Strauss GmbH

Extrakta Strauss new developments

Encapsulated ingredients and sour coatings are necessary for the consumer's favorite taste! Sour and sweet in a balanced combination with a longlasting taste. So why don't you try something new? Test our new acidifying agents for gummies and jellies with controlled release times and more independence for your sourcing with just one click. Contact our experts to meet consumers' tastes in a new way.

CandySand

is our new sweet solution for your sour-sanded gummies and jellies! As an acidifying agent with a perfect balance of encapsulated malic acid and sugar. It has the advantages of dissolving slower than usual and inhibiting unintended chemical reactions. Because we don't use other additives inside, you stay more flexible and independent within your purchasing and development processes - pure, easy, and functional! Reason why: pure material, well-balanced acidity and sweetness, increased effect and last longer while eating.

CandySourMI82

Need something for inside? Our new encapsulated acidifying agent with a special coating for confectionery fillings, belts, and fine bakery products. This coating is made of mono- and diglycerides from fatty acids, without hardened palm fat. It was developed to increase quality and stability over shelf life and ambient storage. Reason why: increasing the durability and quality, without palm, prevent unintended reactions and controlled release.

Preservative agents, bakery

Encapsulated sorbic acid and calcium propionate ensure the perfect quality of your baked goods during their shelf life - but why encapsulated instead of using raw materials? Reason why: less consumption of yeast, delayed anti-microbial effect, inhibit the growth of molds and perfect quality above the shelf life.
