

Wisefood GmbH

About Wisefood

Wisefood is market leader in eco-friendly and edible disposable tableware. Our edible portfolio is made of quickly regrowable raw materials such as different types of grains and apple fibres, a byproduct of apple juice production. Always following the motto: First use - then eat! Apart from our edible line we also offer a complete range of reusable or fully biodegradable disposable non-food products. Reach out to isabella@wisefood.de and get your free samples now!

Edible Straws

Our edible straws mark the beginning of our Wisefood journey. The vegan straws made from wheat and apple fibre are the perfect straw alternative! They have a fresh and fruity taste, but do not affect the drink's taste. They will remain stable in your drink for around 60 minutes, even up to two hours in cold and alcoholic cocktails. Contact us for packaging, type and color options.

Edible Spoons

No matter if ice cream, cappuccino, creamy desserts, or yoghurt, our gluten free, vegan spoon is always a perfect fit. Based on quickly regrowable raw materials such as corn and apple fibres, our crunchy spoon can easily replace the wafer to your ice cream. Its cookie-like taste amazes everyone - especially our little ones.

Edible Cups

This sustainable cup alternative is edible and tasty. It's crunchy, cookie-like taste compliments especially hot drinks such as coffee, tea or hot chocolate and makes the perfect treat to snack on. With a temperature of 85° the cups will remain crunchy for up to 40 minutes, yet leak-proof for up to 12 hours. However, the cups are also great to be used with cold drinks, ice cream or to transport other food products.
